

## SERIES 5810 STORED-VALUE CARD PAYMENT SYSTEM

### Series 5810 System

- A Series 5810 Card Payment System consists of a number of Model 4815MAxx Payment Mechs (one for each attraction), one or more Model 481x Issuer/Redemption Units, a Model 24x0 Network Driver and one or more Model 998x Software Packages. Standard versions of the various models are listed below. These system components are designed to be readily modified for particular customer applications. Contact Xico for assistance in specifying a particular installation.
- Each Series 5810 System contains a secret SID Code unique to each customer which can neither be read nor changed in the field. Only equipment with the correct SID Code, and cards validated with such equipment, will work in the System. Each customer's equipment is identified by adding an -Xyyy number to the model number.
